Historical College-Going Rate

Philip Barbour High School Complex

Education Pays!

Annual median wages of 2016 West Virginia public high school graduates, by highest degree earned.

Action Steps:

- ✓ Encourage a student to take a college-level course in high school.
- ✓ Help a student submit a college application.
- ✓ Host a FAFSA completion event at your school.
- ✓ Organize a college campus visit.
- ✓ Invite a current college student or recent graduate to speak at your school.

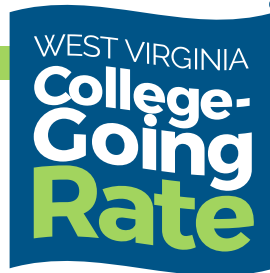

Set the Bar with Your **CGR!**

What is the CGR?

Every year, we calculate the "College-Going Rate" (CGR) – the percentage of West Virginia public high school seniors who enrolled in a college, university or career technical/vocational school immediately after high school graduation. The CGR is an important measure of the college-going patterns of high school students in your area and can inform the steps you take to help more West Virginians achieve the college dream!

Why's it important?

The CGR directly affects everything from social mobility to income equality. The higher the CGR, the better the future looks for our students, our communities and our state.

Start with a goal!

The CGR report is a great tool to help your school or county set goals for improving your CGR, then track your progress toward achieving them! It lets us see where we're strong and where we need to improve so we can sharpen our focus moving forward.

Take action!

It may only take a few students to move your CGR in the right direction. For example, at Philip Barbour High School Complex, if you work to help about **11** additional students enroll in college next year, your CGR will increase by 10 percentage points!

Visit Explorer -
West Virginia's Higher Education Data Portal for more CGR data!

The published college-going rate accounts for only those public high school students who matriculated to a West Virginia public college or university, or any public or private institution or Career and Technical Education Center nationally that reported data to the National Student Clearinghouse. At this time, we are unable to account for students graduating from private high schools, or those who pursued other meaningful educational or career pathways after high school, including participating in certain vocational or apprenticeship programs, and service in the United States Armed Forces.

The CGR report is a great tool to help your school or county set goals for improving your CGR, then track your progress toward achieving them! It lets us see where we're strong and where we need to improve so we can sharpen our focus moving forward.

Take action!

It may only take a few students to move your CGR in the right direction. For example, at Braxton County High School, if you work to help about **13** additional students enroll in college next year, your CGR will increase by 10 percentage points!

Why's it important?

The CGR directly affects everything from social mobility to income equality. The higher the CGR, the better the future looks for our students, our communities and our state.

What is the CGR?

Every year, we calculate the "College-Going Rate" (CGR) – the percentage of West Virginia public high school seniors who enrolled in a college, university or career technical/vocational school immediately after high school graduation. The CGR is an important measure of the college-going patterns of high school students in your area and can inform the steps you take to help more West Virginians achieve the college dream!

Start with a goal!

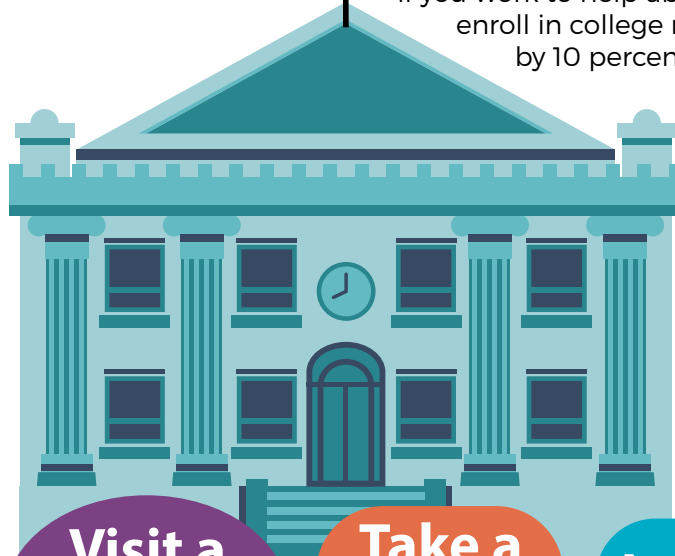

The CGR report is a great tool to help your school or county set goals for improving your CGR, then track your progress toward achieving them! It lets us see where we're strong and where we need to improve so we can sharpen our focus moving forward.

What is the CGR?

Every year, we calculate the "College-Going Rate" (CGR) – the percentage of West Virginia public high school seniors who enrolled in a college, university or career technical/vocational school immediately after high school graduation. The CGR is an important measure of the college-going patterns of high school students in your area and can inform the steps you take to help more West Virginians achieve the college dream!

Start with a goal!

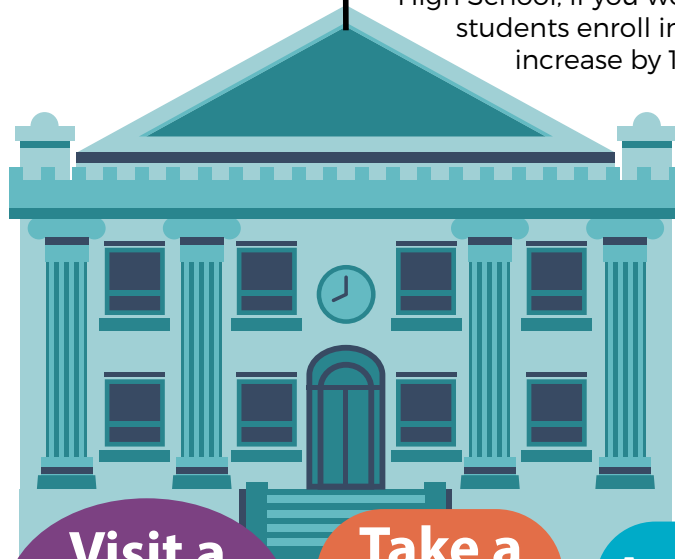

The CGR report is a great tool to help your school or county set goals for improving your CGR, then track your progress toward achieving them! It lets us see where we're strong and where we need to improve so we can sharpen our focus moving forward.

Take action!

It may only take a few students to move your CGR in the right direction. For example, at Greenbrier East High School, if you work to help about **22** additional students enroll in college next year, your CGR will increase by 10 percentage points!

Why's it important?

The CGR directly affects everything from social mobility to income equality. The higher the CGR, the better the future looks for our students, our communities and our state.

The published college-going rate accounts for only those public high school students who matriculated to a West Virginia public college or university, or any public or private institution or Career and Technical Education Center nationally that reported data to the National Student Clearinghouse. At this time, we are unable to account for students graduating from private high schools, or those who pursued other meaningful educational or career pathways after high school, including participating in certain vocational or apprenticeship programs, and service in the United States Armed Forces.

What is the CGR?

Every year, we calculate the "College-Going Rate" (CGR) – the percentage of West Virginia public high school seniors who enrolled in a college, university or career technical/vocational school immediately after high school graduation. The CGR is an important measure of the college-going patterns of high school students in your area and can inform the steps you take to help more West Virginians achieve the college dream!

Start with a goal!

The CGR report is a great tool to help your school or county set goals for improving your CGR, then track your progress toward achieving them! It lets us see where we're strong and where we need to improve so we can sharpen our focus moving forward.

Take action!

It may only take a few students to move your CGR in the right direction. For example, at Ravenswood High School, if you work to help about **9** additional students enroll in college next year, your CGR will increase by 10 percentage points!

Why's it important?

The CGR directly affects everything from social mobility to income equality. The higher the CGR, the better the future looks for our students, our communities and our state.

Education Pays!

Annual median wages of 2016 West Virginia public high school graduates, by highest degree earned.

Action Steps:

- ✓ Encourage a student to take a college-level course in high school.
- ✓ Help a student submit a college application.
- ✓ Host a FAFSA completion event at your school.
- ✓ Organize a college campus visit.
- ✓ Invite a current college student or recent graduate to speak at your school.

Set the Bar with Your **CGR!**

What is the CGR?

Every year, we calculate the "College-Going Rate" (CGR) – the percentage of West Virginia public high school seniors who enrolled in a college, university or career technical/vocational school immediately after high school graduation. The CGR is an important measure of the college-going patterns of high school students in your area and can inform the steps you take to help more West Virginians achieve the college dream!

Start with a goal!

The CGR report is a great tool to help your school or county set goals for improving your CGR, then track your progress toward achieving them! It lets us see where we're strong and where we need to improve so we can sharpen our focus moving forward.

Take action!

It may only take a few students to move your CGR in the right direction. For example, at Lewis County High School, if you work to help about **17** additional students enroll in college next year, your CGR will increase by 10 percentage points!

Why's it important?

The CGR directly affects everything from social mobility to income equality. The higher the CGR, the better the future looks for our students, our communities and our state.

What is the CGR?

Every year, we calculate the "College-Going Rate" (CGR) – the percentage of West Virginia public high school seniors who enrolled in a college, university or career technical/vocational school immediately after high school graduation. The CGR is an important measure of the college-going patterns of high school students in your area and can inform the steps you take to help more West Virginians achieve the college dream!

Start with a goal!

The CGR report is a great tool to help your school or county set goals for improving your CGR, then track your progress toward achieving them! It lets us see where we're strong and where we need to improve so we can sharpen our focus moving forward.

Take action!

It may only take a few students to move your CGR in the right direction. For example, at Wahama High School, if you work to help about **5** additional students enroll in college next year, your CGR will increase by 10 percentage points!

Why's it important?

The CGR directly affects everything from social mobility to income equality. The higher the CGR, the better the future looks for our students, our communities and our state.

It may only take a few students to move your CGR in the right direction. For example, at Clay-Battelle High School, if you work to help about **6** additional students enroll in college next year, your CGR will increase by 10 percentage points!

Why's it important?

The CGR directly affects everything from social mobility to income equality. The higher the CGR, the better the future looks for our students, our communities and our state.

What is the CGR?

Every year, we calculate the "College-Going Rate" (CGR) – the percentage of West Virginia public high school seniors who enrolled in a college, university or career technical/vocational school immediately after high school graduation. The CGR is an important measure of the college-going patterns of high school students in your area and can inform the steps you take to help more West Virginians achieve the college dream!

Start with a goal!

The CGR report is a great tool to help your school or county set goals for improving your CGR, then track your progress toward achieving them! It lets us see where we're strong and where we need to improve so we can sharpen our focus moving forward.

Take action!

It may only take a few students to move your CGR in the right direction. For example, at Morgantown High School, if you work to help about **42** additional students enroll in college next year, your CGR will increase by 10 percentage points!

Every year, we calculate the "College-Going Rate" (CGR) – the percentage of West Virginia public high school seniors who enrolled in a college, university or career technical/vocational school immediately after high school graduation. The CGR is an important measure of the college-going patterns of high school students in your area and can inform the steps you take to help more West Virginians achieve the college dream!

Start with a goal!

The CGR report is a great tool to help your school or county set goals for improving your CGR, then track your progress toward achieving them! It lets us see where we're strong and where we need to improve so we can sharpen our focus moving forward.

Take action!

It may only take a few students to move your CGR in the right direction. For example, at Buffalo High School, if you work to help about **8** additional students enroll in college next year, your CGR will increase by 10 percentage points!

Why's it important?

The CGR directly affects everything from social mobility to income equality. The higher the CGR, the better the future looks for our students, our communities and our state.

The published college-going rate accounts for only those public high school students who matriculated to a West Virginia public college or university, or any public or private institution or Career and Technical Education Center nationally that reported data to the National Student Clearinghouse. At this time, we are unable to account for students graduating from private high schools, or those who pursued other meaningful educational or career pathways after high school, including participating in certain vocational or apprenticeship programs, and service in the United States Armed Forces.

What is the CGR?

Every year, we calculate the "College-Going Rate" (CGR) – the percentage of West Virginia public high school seniors who enrolled in a college, university or career technical/vocational school immediately after high school graduation. The CGR is an important measure of the college-going patterns of high school students in your area and can inform the steps you take to help more West Virginians achieve the college dream!

Start with a goal!

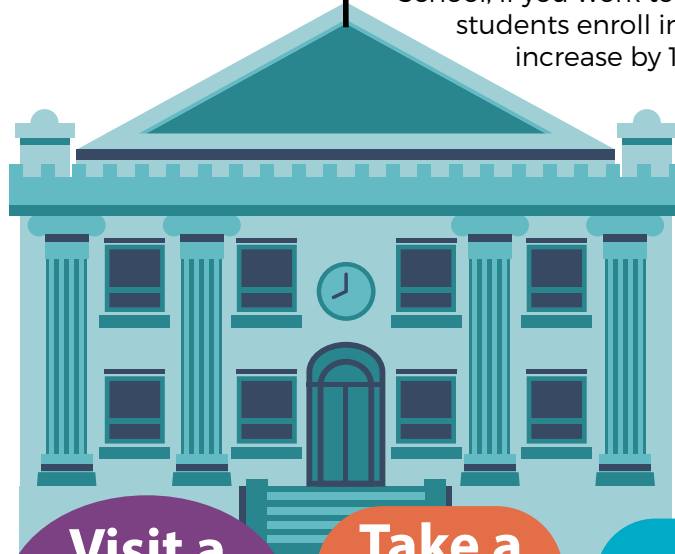

The CGR report is a great tool to help your school or county set goals for improving your CGR, then track your progress toward achieving them! It lets us see where we're strong and where we need to improve so we can sharpen our focus moving forward.

Take action!

It may only take a few students to move your CGR in the right direction. For example, at Summers County High School, if you work to help about **9** additional students enroll in college next year, your CGR will increase by 10 percentage points!

Why's it important?

The CGR directly affects everything from social mobility to income equality. The higher the CGR, the better the future looks for our students, our communities and our state.

What is the CGR?

Every year, we calculate the "College-Going Rate" (CGR) – the percentage of West Virginia public high school seniors who enrolled in a college, university or career technical/vocational school immediately after high school graduation. The CGR is an important measure of the college-going patterns of high school students in your area and can inform the steps you take to help more West Virginians achieve the college dream!

Start with a goal!

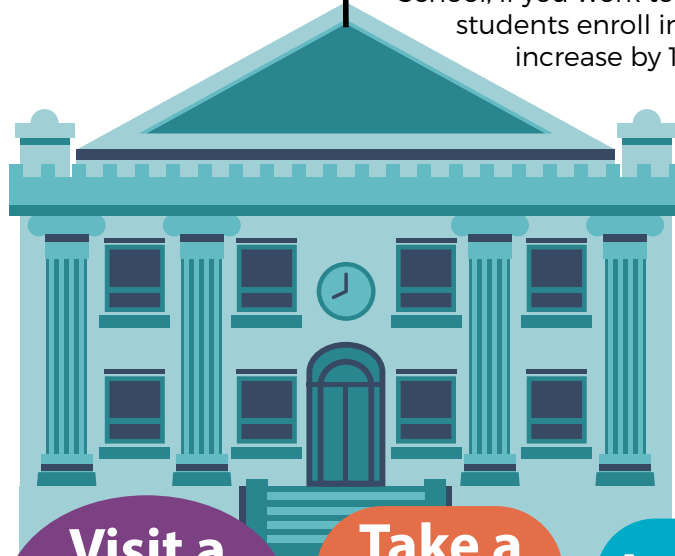

The CGR report is a great tool to help your school or county set goals for improving your CGR, then track your progress toward achieving them! It lets us see where we're strong and where we need to improve so we can sharpen our focus moving forward.

Take action!

It may only take a few students to move your CGR in the right direction. For example, at Valley High School, if you work to help about **3** additional students enroll in college next year, your CGR will increase by 10 percentage points!

Why's it important?

The CGR directly affects everything from social mobility to income equality. The higher the CGR, the better the future looks for our students, our communities and our state.

The published college-going rate accounts for only those public high school students who matriculated to a West Virginia public college or university, or any public or private institution or Career and Technical Education Center nationally that reported data to the National Student Clearinghouse. At this time, we are unable to account for students graduating from private high schools, or those who pursued other meaningful educational or career pathways after high school, including participating in certain vocational or apprenticeship programs, and service in the United States Armed Forces.
