The maximum turn-around time for shop drawings will be two weeks (ten working days) from the date of receipt in the Architect's office to the date of return delivery. General Contractor and Architect shall increase coordination efforts when large numbers of shop drawings are invited.

5. Refer to the Project Manual (if available) for specific submittal procedures.

6. Shop drawings shall not simply be a copy of the engineer's design drawings with the contractor's title block. Electronic files from the E.O.R. can be provided to the G.C. at a negotiated fee. Fee will be based on amount of subcontractor's contract and benefit to subcontractor.

7. Shop drawings shall be completely prepared by the submitting entity.

4. Water Cement Ratio: All concrete subjected to exposed to freezing and thawing in moist condition and/or required to be watertight shall have a maximum water-cement ratio of 0.45. All reinforced concrete exposed to deicing salts, brackish water seawater or spray from these sources, shall have a maximum water-cement ratio of 0.40.

5. Maximum aggregate size shall be 1 1/2 ", well graded, well-shaped (not elongated, flat, or slippery), and free of clay, dirt, and excess fines, U.N.O.

21. All new concrete shall be bonded to previously placed concrete per specification requirements, U.N.O.

22. The Contractor shall prepare shop drawings showing detail layouts of reinforcing, including dimensions, openings, and spacing, bending details, bar schedules, and similar items required for the proper construction of the work.Provisions for the connection of work by other trades shall be indicated on the shop drawings. Two cylinders will be tested at 7 days and two at 28 days.

FOUNDATIONS:

1. Foundation design is based on an assumed allowable soil bearing pressure of 1,500 psf. A professional geotechnical engineer licnesed in the state of West Virginia shall verify this assumption before construction. Structural engineer is not responsible for subsurface conditions encountered in the field different from those assumed for design.

2. Foundations are indicated on the drawings as either drilled piers or spread footings, based on an interpretation of information provided in the geotechnical report. After excavation to the bearing elevation and after evaluation of the bearing medium, it may be necessary to revise the foundation design from a drilled pier to a spread footing or from a spread footing to a drilled pier. The minimum length of drilled piers shall be 2.0 times the diameter of the drilled pier. If auger refusal is reached at an elevation where the length of a drilled pier would be less than 2.0 times the diameter of the drilled pier, then a rock socket shall be provided.
